DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

Claim 5 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The recitation of claim 5 of "The solids separation system of claim 6" is obviously a mistake; therefore, it is vague and indefinite as to what claim number the applicant actually intends to have claim 5 depend from. One way to correct this problem would be to change the recitation of "The solids separation system of claim 6" to ---The solids separation system of claim 4---.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Application/Control Number: 10/781,186

Art Unit: 1723

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gipson et al.

Regarding claims 1-40; Gipson et al. who disclose a process for removing solid particles from flowing fluids in an apparatus comprising a production well (11) connected to an end of an entry line (12) of a solids separation system, the solids separation system further comprising: a hydrocyclone (14) having an inlet connected to another end of the entry line (12), the entry line (12) having a valve; the hydrocyclone

Application/Control Number: 10/781,186

Art Unit: 1723

(14) further including an overflow outlet connected to an overflow line (15) and an underflow solids outlet connected to an underflow solids line (17a), the overflow line (15) having a valve and the underflow solids line (17a) having multiple valves, with one of the valves being a choke valve. (Fig. 1)

Regarding claims 1, 2, 10-15, 17-22, 26-34 and 38-40; Gibson et al. discloses the claimed invention but fails to teach that his hydrocyclone (14) is the type as claimed in claims 1, 2, 10-15, 17-22, 26-34 and 38-40. It is considered that it would have been obvious to one having ordinary skill in the art at the time the invention was made that Gibson et al.'s hydrocyclone be of the type claimed in claims 1, 2, 10-15, 17-22, 26-34 and 38-40 since that type of hydrocyclone is conventional.

Regarding claim 3; Gibson et al. suggest the claimed invention as discussed above but fails to teach that his separation system is mounted on a frame. It is considered that it would have been obvious to one having ordinary skill in the art at the time of the invention to have mounted Gibson et al.'s separation system on a frame, because it is well known to mount things on a frame.

Regarding claim 4-6 and 16; Gibson et al. suggest the claimed invention as discussed above but fails to teach that his valves are of the type claimed in claims 4-6 and 16. It is considered that it would have been obvious to one having ordinary skill in the art at the time of the invention that Gibson et al.'s valves are of the type claimed in claims 4-6 and 16, because the type of valves claimed are conventional valves.

Regarding claims 7-9, 23-25 and 35-37; Gibson et al, suggest the claimed invention as discussed above but fails to teach the instantly claimed second inlet. It is

Application/Control Number: 10/781,186 Page 5

Art Unit: 1723

considered that it would have been obvious to one having ordinary skill in the art at the time of the invention for Gibson et al.'s hydrocyclone to have a plurality of inlets because a lot of hydroyclones have a plurality of inlets. Furthermore, it has been held that mere duplication of the essential working parts of a device involves only routine skill in the art. St. Regis Paper Co. v. Bemis Co., 193 USPQ 8.

Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ford et al., who discloses a hydrocyclone, which includes many of the features of the applicant's hydrocyclone, but fails to teach that his hydrocyclone includes valves. Benzon, who discloses a hydrocyclone, which includes many of the features of the applicant's hydrocyclone including multiple inlets, but fails to teach that his hydrocyclone includes valves.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David A. Reifsnyder whose telephone number is (571) 272-1145. The examiner can normally be reached on M-F 9:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Wanda M. Walker can be reached on (571) 272-1151. The fax phone
